

# recycle sacksack Waste Solutions

End of aisle location

A range of colour coded designs

Hook-on and off in seconds for swift emptying

Tough, woven handles at the sides and base

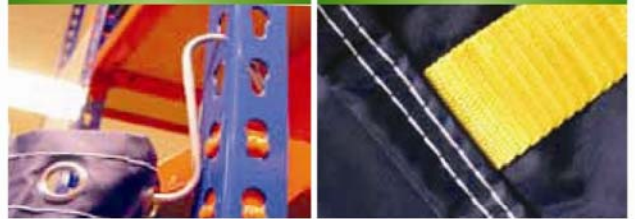

The racksack quickly fixes to the end frames around the warehouse and is designed for most racking and shelving systems between 900mm and 1100mm. Once full, racksacks can be removed and emptied with ease.

Originally designed for the warehouse racksack's flexible method of 'S' locator fixing means it can be hung over or hooked onto any substrate. That's why the racksack has quickly established itself a place in other industrial areas such as factories, offices or anywhere where waste has become a problem.

Made from tough woven polypropylene, racksack adequately withstands the rigours of an industrial environment.

3 strong handles are woven into the edge of the sack, one on each side for carrying and one on the base, so that the sack can be easily tilted from the base and emptied.

There are 14 designs available, 13 printed waste segregation options plus a completely blank sack.

Large waste capacity
